COMMENTS TO AUTHORS

The case report involves the treatment of a patient with gastric cancer treated with a already described neo-adjuvant protocol. There is no general diagnostic challenge in reading the manuscript for the general reader of WJGE. The follow-up interval is too short to claim any benefit after this extensive resection.

COMMENTS TO AUTHORS

This case report describes a case of HER-2 overexpressing advanced gastric carcinoma successfully treated with surgery and combined chemotherapy of trastuzumab, oxaliplatin and capecitabine. The manuscript is well written and provides some information that is potentially useful to readers. I have only minor comments. 1. Please give information on the toxicity related to chemotherapy. 2. Observation period of 1 year is too short to evaluate treatment outcome.

COMMENTS TO AUTHORS

Recently, the case presentations have been reported that trastuzumab is effective on HER-2 positive gastric cancer. Accumulation of such a successful case is important for the clinical practice. The case report has a scientific value to be published in World Journal of Gastroenterology. Please revise the present title to "Surgical resection of an advanced gastric cancer following a combination therapy of trastuzumab, oxaliplatin and capecitabine".
