COMMENTS TO AUTHORS

Very interesting manuscript about intractable anismus. In this manuscript, the authors evaluated the efficacy of botulinum toxin type-A injection to the puborectalis and external sphincter muscle to treat patients with anismus unresponsive to simple biofeedback training. This retrospective study is very well written. Only some minor revisions suggested. 1 The manuscript need some editing before final publication. 2 The title should be revised and it should more focus on the constipation. 3 Results should be discussed more deeper. 4 The references should be updated with more recent literature.
