COMMENTS TO AUTHORS

This review focused on the role and potential application of a series of proteolytic enzymes in colorectal cancer. It is well organized and based on a lot of literature. However, the paragraph of section 5 is too short. I would strongly recommend the author to pay more attention to the review of the potential role of proteolytic enzymes in the treatment of cancer.

COMMENTS TO AUTHORS

Good review well written and well referred. Important and poorly researched area.

COMMENTS TO AUTHORS

The Authors must be commended for this comprehensive review about the role of proteolytic enzymes on cancerogenesis and tumor progression and metastasis. The topic is not new but this is a good overview of the topic. I would include in the references also a paper which dealt with this topic several years before the Authors studies like "Blood and tissue fibrinolytic profiles in patients with colorectal carcinoma. Montemurro P, Conese M, Altomare DF, Memeo V, Colucci M, Semeraro N. Int J Clin Lab Res. 1995;25(4):195-200."

COMMENTS TO AUTHORS

Please (1). Add the molecular mechanism about how the proteolytic enzymes regulating the carcinogenesis and cancer progression. (2). Add discussion about how well are the proteolytic enzymes in predicting early CRC survival. Since stage III and IV patients will be routinely receive C/T and/or target therapy, but not for every stage I and II patients. (3). Add tables or figures for making the concepts more easily to be caught by the readers. (4). Add conclusion at the end of the review.

COMMENTS TO AUTHORS

The paper is about review of proteolytic enzymes in colorectal cancer. There are some points needed to be addressed. 1. The abstract did not summarize properly the content of the manuscript. For instances, the classes of proteolytic enzymes should be included. 2. A conclusion should be added in the manuscript about the possible future roles of the proteolytic enzymes in colorectal cancer. 3. Some tables should be added to elaborate and document the results of proteolytic enzymes in colorectal cancers (or GI cancers). 4. A diagram linking the different components of proteolytic enzymes mechanisms in cancer (or colorectal cancer) is useful. 5. Minor comments: Please check the reference format as some are not uniform. The language of the manuscript needs polishing.
