COMMENTS TO AUTHORS

There are many papers on utility of MDCT in differential diagnosis of internal hernia. I hope some comments about MDCT in your discussion.

COMMENTS TO AUTHORS

This is a well written case report of surgical interest. On histology the authors should comment on the presence of acute inflammation indicating if there was also acute diverticulitis as now they only describe absence of metaplasia. Figure 4 needs an inset of higher magnification to clearly show the heterotopic gastric mucosa. They also refer to pancreatic mucosa but this is not seen in Figure 4. If pancreatic mucosa was indeed identified histologically then this should also be shown and commented upon.
