COMMENTS TO AUTHORS

This manuscript is a review of the contemporary and minimally invasive management of necrotizing pancreatitis and infected pancreatic necrosis. The authors have done a good job at portraying their approach to the disease as well as selecting important literature that supports or refutes each of the operative approaches to the disease. The manuscript does have minor problems, specially in language and style. I have attached an edited version with some changes, suggestions and comments. Feel free to accept or delete any of them. I think a treatment algorithm based on the authors experience would enhance the manuscript as well. Congratulations on a well written review!

COMMENTS TO AUTHORS

This is an interesting paper on the management of necrotizing pancreatitis. The title should be changed to - Surgical Management of Necrotizing Pancreatitis – an overview. Other changes that I propose are marked in the text. The conclusions are too long. They need to be rephrased.
