### COMMENTS TO AUTHORS

This paper is informative on the possibility of efficaciously treat ruptured HCC with sorafenib in combination with surgery or TAE/TACE. It is quite well written and could be accepted after only a little style and language revision.

### COMMENTS TO AUTHORS

The theme of the study is interesting. HCC is an important situation, one of the most important cancers. The authors reported a single center's experience of patients with ruptured HCC during a 5-year period. The methods section of the abstract should be revised with more information. The result is good, and well discussed. The English must be reviewed.
