COMMENTS TO AUTHORS

Thank you for the invitation to review this interesting case submitted for publication in World Journal of Gastroenterology. In this case report, the authors reported a very rare case of giant angiosarcoma of small intestine showing sepsis. They also reported that sepsis was presented since necrotic portion of tumor had communication with tract of small intestine. This article is well written and I have just a few questions. 1. Which word is correct, SIRS or sepsis? 2. Did the authors identify any micro-organism from tissue or blood? If yes, it would be better to describe the information of identified organism and appropriate antibiotics. 3. Were there any symptoms or signs indicating gastro-intestinal bleeding?
