COMMENTS TO AUTHORS

HCV infection in leukocytes may influence the recurrence of HCV post transplantation, and should be considered for the antiviral therapy strategies in recurrent HCV infection. The authors should discuss about this point (CVD Prevention and Control 2010;5:51-58).

COMMENTS TO AUTHORS

The authors well summarized the current status of management of recurrent hepatitis C after liver transplantation and its future perspective. Although I have no criticism about the manuscript, an addition of some tables summarizing the efficacy of treatments on the recurrent hepatitis c might be more helpful for the readers.
