COMMENTS TO AUTHORS

The manuscript by Guo et al is very interesting and well written. In this manuscript, the authors investigated the expression of GKN1 in normal gastric mucosa, precancerous lesions and gastric cancer tissues, and analyze its correlations with tumor site and pathological pattern. Of about 30 gastric cancer patients, 13 atrophic gastritis patients and 15 healthy volunteers with almost normal gastric mucosa were enrolled in this study. The authors found that H. pylori infection had no significant relation with age, gender, tumor site or pathological pattern in all subjects. They concluded that compared with almost normal gastric mucosa, GKN1 expression in gastric mucosa of gastric cancer patients is decreased, which is associated with the progression and prognosis of gastric cancer. Some minor comments 1 The manuscript need editing according to the format of the journal. 2 Some minor language polishing should be corrected. 3 The results should be discussed in a more deeper style. 4 References should be updated.
