COMMENTS TO AUTHORS

This is an interesting and large study on a rather rare disease in western countries. The gastrointestinal involvements of Behcet's disease in Chinese patients have been assessed by endoscopy. The manuscript needs to be improved on the methods and results part. *The exact protocol need to be clearly described for the reader and the reason and number of patients doing two colonoscopies to be stated. * On the results the number of excluded patients need to be stated and the results section need to be presented in different subtitles to simplify for the reader. The time for follow up needs to be described.
