COMMENTS TO AUTHORS

This review updates current approaches and future perspectives of modulating cell death signaling in colorectal cancer therapy. The topic may have some significant interests to WJG readers. The following represent specific recommendations: 1. The authors need give more background information about necroptosis and signaling pathways such as RIPK1 and RIPK3. 2. One more section is added to discuss switch/crosstalk among cell death signaling pathways and therapeutic potential of targeting multi-death signaling pathways in cancer treatment. 3. On page 9, line 7, "is" should be "its" (anti-EGFR antibody cetuximab exerts its antitumor effect).
