COMMENTS TO AUTHORS

This case report describes a patient in whom intestinal obstruction occurred due to a clinical thermometer which migrated from the bladder into the abdominal cavity. Whereas this paper needs some revision before publication, it will be the first report of such a case and suitable for publication in World Journal of Gastroenterology. Please consider the following comments and suggestions: Minor 1. I think that the word "enterocoelia" is difficult to understand and had better be changed to "abdominal cavity." 2. The "erect abdominal X-ray" should be changed to "upright abdominal radiograph" or only "(abdominal) radiograph." 3. The "defaecation and deaeration" should be changed to "defecation and flatus." 4. The definite description of the date should be avoided in the paper. "April 2, 2013" should be removed. 5. The statement "He denied any illicit drug use before" seems to be unnecessary. 6. The serum level of C-reactive protein should be described. 7. The statement "capacious fluid levels" appears to be strange and unnecessary. 8. There seems to be too much overlap of the Introduction and Discussion sections. 9. As there seem to be many unnatural statements and descriptions including English mistakes throughout the manuscript, it should be checked again by an experienced author(s) or colleague(s).

COMMENTS TO AUTHORS

I took a little difficulty understanding this article. Thermometer into the urethral orifice in a very difficult situation. There are some missing aspects of the patient's story. In my opinion, the patient had a traumatic process. Can be used for the purpose of sexual activity. The patient can be used rectally, the thermometer. I saw a lot of this type of patients. Large portion of patients who used foreign bodies via rectal route are denied why they use foreign bodies. Considering the structure of the urethral tract, thermometer is very difficult to reach the abdominal cavity from urethral tracus and bladder. After changing the title of this article general content, I would like to re-evaluate.
