COMMENTS TO AUTHORS

Congratulation to the authors on this interest report. Please respond to these queries: 1.The 'INTRO' section does not contain any info about trematode causing appendicitis. The last sentence should read "We herewith present 2 cases of....." 2. What exactly is "a metastatic right lower abdominal pain"? 3. What do you mean "so we considered the local appendix was wrapped"? 4. Authors must clearly explain why colonoscopy was done for both patients, which thereby lead to the diagnosis (and treatment) of Fasciolopsis buski 5. The 'DISCUSSION' section should contain less details of Fasciolopsis buski and more on the worm causing appendicitis 6. Title should be changed, something like this " A Rare cause of appendicitis: mechanical obstruction due to fasciolopsis buski infestation"

COMMENTS TO AUTHORS

There are interesting cases with appropriate pictures. However is not clear the diagnostic of appendicitis. It would be important considered the Alvarado Scale and he ultrasonografic signs for diagnostic of appendicitis (tubular structure, aperistlic, and NOT compressible, parietal Diameter greater than 6mm, with absence or increased vascularity and pain with transducer compress). It would appear that cause of the symptoms and signs belong to cecum inflammation causing chronic abdominal pain. The focus of the discussion would be in diagnostic clinic, radiological or endoscopic from disease that causes chronic abdominal pain.
