COMMENTS TO AUTHORS

The manuscript summarizes the value of ultrasound, including conventional ultrasound, color Doppler imaging and contrast enhanced ultrasound, in the clinical management of pediatric patients with inflammatory bowel disease. This is a well written review and I just have one short comment. There are some typographical errors in the text that should be corrected.

COMMENTS TO AUTHORS

I revised the manuscript entitled "Ultrasonographic imaging of inflammatory bowel disease in pediatric patients". I found the paper very well written and structured, the reference list is complete and the information provided by the author are exhaustive and well detailed. The iconographic material is quite limited, and some more images could be provided to allow readers that are not expert on this topic to better follow the article contents and authors' statements. A few corrections and suggestions have been reported within the text (word file).
