COMMENTS TO AUTHORS

The authors report the case of a 62-year old woman affected by splenic hemolymphangioma. Abstract: this part is concise and clear Introduction: the aim of the study is well explained as well as the rarity of the pathology Case: Surgical details are missing and should be added by the authors. Discussion: it is easy to follow and well written. However I would add the incidence of hemolymphangioma in a numeric scale ("extremely rare" is not precise). In addition, regarding the radiological evaluation: What are the radiological features to suspect an hemolymphangioma? Figures are ok In conclusion this is an interesting rare case but some details should be added prior to publication.
