COMMENTS TO AUTHORS

Excellent review. A few comments: 1. Any relationship with IgG4 disease? 2. Would have liked more detail on pathogenesis and therapy 3. How about a figure to illustrate theories of pathogenesis?

COMMENTS TO AUTHORS

For many years, celiac disease was defined by a set of classic clinical manifestations. However, the combination of serologic, genetic, and histologic data has led to an appreciation of the highly variable clinical manifestations (Recenti Prog Med. 2012 Dec;103(12):564-9. doi: 10.1701/1206.13357. Clinical pattern of celiac disease in a population residing in North Sardinia Italy, of the condition and the description of other categories of celiac disease. More specifically studies of children with CD suggest that aminotransferase elevations may be common at diagnosis, particularly in patients presenting with the classical symptoms of the disease (30-54%). In most patients the aminotransferases normalize with a gluten-free diet. Mild elevations in serum aminotransferases (AST and ALT) were also seen in 42% of adult with CD. On the other hand CD is found in 5-10% of adults with chronic elevations of aminotransferases. Patients with CD appear to have increased risks for a broad spectrum of liver diseases, including acute hepatitis, primary biliary cirrhosis, and chronic hepatitis including autoimmune hepatitis. Several cases of severe liver disease with cirrhosis in children with CD have been reported, but more studies are necessary to established as a causative factor. In the present study Anania C et al. attempted to examine the spectrum of liver diseases related to CD and

to provide a basis for a diagnostic and therapeutic approach. The study is very nicely presented and well structured. These informations could be of interest for clinicians

COMMENTS TO AUTHORS

Overall the review is fair although there is no real novelty. I believe that the topic is not really of current interest and this is witnessed by the fact that references are relatively old with just one strictly related to the topic that is 2014.
