COMMENTS TO AUTHORS

It is a very interesting and very well written case presenting the rare complication of Epstein Barr Virus positive Mucocutaneous Ulcer of the colon associated Hodgkin Lymphoma in a patient with Crohn's disease. Minor suggestions: 1. TITLE: May be the title should be more specific for this rare complication regarding the site and the disease background (i.e. "Epstein Barr Virus positive Mucocutaneous Ulcer of the colon associated Hodgkin Lymphoma in Crohn's disease" 2. In "CASE REPORT SECTION": Why the distal location of EBVMCU precludes selective subtotal colectomy with end-to-end anastomosis? The authors should explain about the difficulties, their thoughts and their decision with more detail.
