COMMENTS TO AUTHORS

There are certain major issues for the authors to concern to make the manuscript suitable for further publication: 1. There should be more previous studies to demonstrate the efficacy and adverse effect of IFX in the introduction part. 2. More information about the patient should be fully elaborated in case report part (for example: family history, allergic history, marital history.) 3. Some typographical errors in the article need to be corrected. 4. More information about medications should be added in the manuscript (for example: the factory that manufactures the medication). 5. There is limited clinical significance as adverse effect has been reported in previous studies. It is highly recommended that more explanation about the particularity of the case report in the discussion part. 6. The language also needs to be polished before publication.
