COMMENTS TO AUTHORS

The authors reported That CD97 promotes gastric cancer cell proliferation and invasion through exome-mediated MAPK signaling pathway. This was thought to be interesting and excellent novel study.

COMMENTS TO AUTHORS

It is a well-written and a well-designed study, which showed, in an elegant manner, the potential role of CD97 and MAPK signaling in gastric cancer cell proliferation. These findings must be demonstrated in vivo to have translational relevance. I have some few observations: 1) In lines 90-91, it is needed to cite the reference. 2) In the Discussion section, it is needed to discuss better the findings of the previous studies and to compare with the present study, as well as to show the weakness of the present paper.
