## COMMENTS TO AUTHORS

**General** In this case report the Authors describe a case of a 53-year-old gastric cancer patient with testis metastasis. Diagnosis of metastatic adenocarcinoma was made after a right-side orchiectomy. This is the first case of a testicular metastasis from gastric adenocarcinoma in mainland of China. They summarize the clinicopathologic features of the disease based on the previously published papers.

**Specific comments** ?Overall, the presentation of the topic is a little confused. ?The English language is unusual poor with several grammatical errors, therefore the language should be improved by a mother-tongue English teacher. ?CT-scan revealed ascites: mild, moderate, high volume? According to this finding, the patient had already peritoneal metastasis? ?The chemotherapy regimen should be discussed in more detail. ?What has happened with the patient during the further follow-up?
