COMMENTS TO AUTHORS

the article did a novel result for esophagus cancer genetic risk factors, has a significance on clinic. suggestion: change the title as "Association analysis of colorectal cancer genetic susceptibility variants with Esophagus cancer in Chinese" there were some minor faults in language, for example, the 2nd sentence under the subtitle Study participants the preposition " by" was ignored.

COMMENTS TO AUTHORS

Minor language faults Recent information with possible future clinical impact. I would recommend to go on with the investigation also with higher involvement of clinicians and to correlate genetic testing also in patients with synchronous esophageal carcinoma and colon polyps/cancer. This comment does not change my recommendation to accept the publication with small language and spelling changes required.
