COMMENTS TO AUTHORS

To the authors The review is accepted for publication. However it would be pertinent some considerations on the use of HBIG and DNA levels on medical treatment of pregnant women to reduce the appearance of mutants and newborn infection. While I understand that is not the subject of this review but I think it would be useful from a practical standpoint.

COMMENTS TO AUTHORS

This is a very comprehensive review for the hepatitis B vaccination. Of course, it should be publish in the World Journal of Gastroenterology. Only one suggestion in the section of policies regarding booster vaccination, the recipient, who is serum HBsAg negative, to have liver transplantation may be consider add in the table 3.
