COMMENTS TO AUTHORS

The review summarizes recent aspects concerning gluten-related disorders. The manuscript includes the essentials and important clinical recommendations. Comments 1. Table 1 could be misleading. Duodenal biopsies are always useful. The statement "not used" should be changed. 2. The heterogeneity of small intestinal tissue damage in celiac disease should be stressed. 3. The pathophysiology of toxic and immunogenic gliadins should be introduced to the readership.

COMMENTS TO AUTHORS

Review of the ms "Diagnosis of gluten related disorders" by Luca Elli et al. This paper summarizes the literature data on gluten-related gastrointestinal disorders and provides a thorough overview on the subject. The authors consider a number of important questions raised about the etiology, pathophysiology and diagnostics relative to therapies of the syndrome (i.e. wheat allergy, celiac and non-celiac disorders, etc) and provided a very even handed and well documented discussion I found that it read quite well, was well organized/presented and well cited. Beyond this, I have no other noted comments.

COMMENTS TO AUTHORS

I Think this is a usefull review of our knowledge on wheat related disorders. I Think the authors should mention infection as a cause of villous atrophy with positive serology, See: Celiac disease and giardiasis: a case report. Edling L, Rathsmann S, Eriksson S, Bohr J. Eur J Gas-troenterol Hepatol. 2012 Aug;24(8):984-7.

COMMENTS TO AUTHORS

Elli et al. have written a review regarding the glutenrelated disorders. It is a very actual topic, as there are some new clinical entity thinked to be caused by the gluten beside the classic celiac disease. These clinical entities are in the centre of interest due to their social and economic significance. Tables and figures are very useful complementary materials in this paper. The review is very accurate and didactic in my opinion. I have only two minor remarks as the followings: The authors listed the complication of celiac disease. The frequency of these complication should be listed also - just to wright their significance in the daily practice. Clinical symptoms of food allergy should be detailed.
