## COMMENTS TO AUTHORS

The manuscript "Effector and Suppressor T cells in Celiac Disease" is a nice overview of the immunopathogenesis of Celiac disease. My few comments are marked in Tracking mode

## COMMENTS TO AUTHORS

The review summarizes the role of T cells and cytokines in the pathogenesis of celiac disease. The data are well summarized and provide important information on the understanding of the immunopathogenesis of the disease. However, the role of genetic backgrounds of the patients, which are closely linked to T-cell mediated immune response, are not mentioned. The authors should mention on that point with a more detailed description on HLA-DQ-restricted CD4+ T cells. There are several English mistakes that need to be corrected.
