COMMENTS TO AUTHORS

This is a very unique bacteria. Is there any affinity of the bacteria to the cellulitis in this case? Can the bacteria be cultured from the local exudate or the lymphatic fluid of the cellulitis lesion? Story of the HBcAb donor or de novo HB hepatitis can be omitted in this article.

COMMENTS TO AUTHORS

Mishima et al. reported a case of Helicobacter cinaedi bacteremia with cellulitis after ABO-incompatible living-donor liver transplantation. This is a rare causative bacteria of cellulitis and bacteremia after liver transplantation. Were minimum inhibitory concentration values of the bacteria for cefazolin, ciprofloxacin and minocycline obtained? Minomycin is a brand name. Minocycline is a generic name.
