COMMENTS TO AUTHORS

This is an interesting case report with a very good theoretical presentation of the underlying disease. It is well written and well presented. I would gladly recommend it for publication

COMMENTS TO AUTHORS

Review for the manuscript 16542 Primary Intestinal Lymphangiectasia with Generalized Warts Diagnosed by Capsule Endoscopy This is an interesting case report and review of the similar cases about Primary Intestinal Lymphangiectasia complicated with viral infection. Major comment: the title should be changed, because the disease was not diagnosed with capsule endoscopy. They can only assume that the capsule endoscopy pictures demonstrate mucosal changes similar to lymphangiectasia. The other parts of the manuscript like abstract et cetera should also be changed accordingly. I conclude that the case report with review is well structured and very informative and therefore can be accepted, if the authors will change the manuscript as suggested.
