## COMMENTS TO AUTHORS

The article is interesting due to the fact that there is presented a rare case of hepatic inflammatory pseudotumor in a 8-year-old boy. The references are not enough new and should follow the recommendations of the journal. I suggest to discuss that case in the light of recent data from the literature. The authors should also make reference to the differential diagnosis with the macrophage activation syndrome. There are also some spelling mistakes which must be corrected [ex erythrocyte sedimentation rate (ESR) of 140 ml/hr].

## COMMENTS TO AUTHORS

The present paper by Hussa Al-Hussaini et al. described the case report, "Hepatic Inflammatory Pseudotumor Presenting in an 8-Years-Old Boy: A Case Report". In this reports, they demonstrated an extremely rare case of Hepatic inflammatory pseudotumors in an 8-year-old boy. I agree that hepatic IPT in childhood is rare, but I think that this article does not have enough quality for this journal. The authors should consider the following question and answer them adequately. 1) There is not new knowledge about IPTs. 2) If the authors want to emphasize the rare case of hepatic IPT in childhood, the authors should summarize the previous reports of hepatic IPT in childhood. 3) The authors should discuss about something new, for example, radiological finding which is specific to IPT.
