		<input checked="" type="checkbox"/> No	

### COMMENTS TO AUTHORS

The manuscript is not well constructed. It contains repetitions, the explanations are too long and scholastic, even the facts and knowledges are now evident. Also the language requires revision.

### COMMENTS TO AUTHORS

A very interesting textbook like article. It can certainly be interesting for many to read. It really looks more like a PhD thesis Introduction chapter ( which as I understand actually is ) than an article, but still very well written and worth publishing

### COMMENTS TO AUTHORS

The present manuscript reviews current knowledge about Rectal cancer and Fournier’s gangrene. The paper is well written and carefully designed. There are few suggestions: Generally, I suggest extensively shortening the entire paper and focus on relevant information only. Table 4 could be cancelled as it describes Avastin associated risk factors only. I am not convinced if all Tables are required as they are presenting huge amount of data and therefore appear confusing.

### COMMENTS TO AUTHORS

ESPS Manuscript No: 17155 this is an interesting systematic review on Rectal cancer and Fournier's gangrene. The article is overall well written and widely detailed. The literature is updated. My major concern, it is the length of the manuscript, that sometimes it is hard to read. I would recommend some changes as below reported: 1) Pathophysiology: use anatomic schematic drawings to help the Readers to better understand the mechanisms of spreading of infection 2)Clinical presentations: it could be very useful to add some clinical images of the different phases and presentations 3) Diagnosis and treatment. I strongly recommend to add an algorithm or workflow or carepath that could help the Readers to understand better the management of this condition
