COMMENTS TO AUTHORS

The present study confirms the curative effect on of QHF on HCC and the mechanism of HCG/c-Met signaling pathway. The present data is solid and the description is clear. One suggestion listed below:

1. As the manuscript referred that "Inhibition of VEGF expression may play a major role [18], in the process, with QHF regulating HGF/c-Met," described in discussion section, in addition of the VEGF assay by western blot, to further confirm the anti-angiogenic effect of QHF, the immunohistochemical assay of vascular marker, such as CD31 or CD34 is suggested.

COMMENTS TO AUTHORS

Good study design overall. Please dictate abbreviations used in abstract and indicate p-value for inhibition of tumor growth. Will need to revise command of language.
