COMMENTS TO AUTHORS

Minor issues: 1. In the "Abstract" section, some words are not appropriate, e.g. Traditional and molecularly "targeted" therapy for gastric cancer provided "disappointing results". 2. In "DYSREGULATION OF NON-CODING RNAS IN GASTRIC CANCER" section (page 4), the repeat descriptions should be omitted, e.g. "MiRNAs that function as regulators of gene expression transcriptionally were found in multiple physiological and pathological processes, including growth, differentiation, immune regulation and diseases[31-33]." and " At present, lncRNAs have been confirmed to be involved in the regulation of cellular function. Abnormal regulation of these lncRNAs can promote tumorigenesis through the resulting disruption of those essential functions[85]." (page 7). 3. In "DYSREGULATION OF NON-CODING RNAS IN GASTRIC CANCER" section, the authors can give subheadings such as up-/down-regulated of miRNAs in Gastric Cancer like lncRNA (pages 7 and 8). 4. Regarding the "FUNCTION AND CLINICAL IMPLICATIONS", the authors should describe the role of miRNAs and lncRNAs simultaneously under specific functions of survival, apoptosis, etc. 5. Because several relevant descriptions have been identified in Tables, please make all the text more concise in this current manuscript.

COMMENTS TO AUTHORS

This manuscript is an interesting subject about the dysregulation of non-coding RNAs. There are, however, somewhat troublesome points that must be clarified. 1. You summarized dysregulated microRNAs as up or down regulation in tables. But, there is no description about up or down regulation of microRNAs in the manuscript. I think you can give subheadings such as up or down regulated microRNA like long non-coding RNA. 2. This manuscript is too wordy. I think you can make it more concise.
