		<input type="checkbox"/> No records	<input type="checkbox"/> Major revision

COMMENTS TO AUTHORS

For characterisation of the patients it would be helpful to get the full information of the Montreal classification, in particular for the patients with / without previous surgery who may represent different risk profiles. Different medical systems may lead to different results, maybe medical treatment ordered by surgeons or postop surveillance by internal medicine. This study focus on the situation in the US, it maybe interesting to add an international view to the discussion.
