### COMMENTS TO AUTHORS

The manuscript submitted by Hisashi Iizasa describes human gastric microbiota by discussing its mutual interaction and pathogenic enrollment. This review can support good information regarding infection with H. pylori and Epstein-Barr virus (EBV) to readers. However, I believe that the authors can improve the review article significantly before its ultimate publication, such as: 1. In Introduction section, authors should describe whether EBV belongs to gastric microbiota. 2. It is better that authors would describe the impact of hypermethylation in EBV on the gastric microbiota.
