## COMMENTS TO AUTHORS

The Editorial of Hsieh and colleagues is interesting; they reported how Hepatic stellate cells (HpSCs) can interact both with innate and adaptive immune system. The Editorial is clear and elucidate the role of HpSCs in the control of immune system. The Authors should include some new paper recently published to increase the importance of the article (e.g. Dusabineza et al 2015 etc.) The paper is comprehensive but still need some corrections to improve its fluency.

## COMMENTS TO AUTHORS

This is an interesting review on the immune potential of HSCs. The Abstract and the Core Tip need some attention. Additionally, the authors should unify HpSC in singular or in plural (e.g.: Figure 2). Minor changes: \*immunoregulatory activity during cotransplantation \*effectively protecting the islet allografts from rejection. Multiple mechanisms participate in immune tolerance induced by HpSCs \*the results increase the hope of this technique. This article elucidates the HpSCs. \*The combination of these mechanisms indicates that HpSCs are....

## COMMENTS TO AUTHORS

This was a very nicely written editorial by the experts in this field.
