## COMMENTS TO AUTHORS

This paper contains some interesting findings. And the authors firstly reported a case of single incision laparoscopic duodenojejunostomy, which could both cure SMA syndrome and improve cosmetic effect. We believe this minimally invasive surgery will be suitable for the patients with SMA syndrome who do not respond to the conservative treatment. However, we think the length of the Discussion section is a little bit longer for a case report, which should better focus on the advancement and novelty of surgical techniques. Moreover, the impact of Surgery and anesthesia approach on the severity of anorexia nervosa has not been mentioned in the article, which could bring further doubts to the readers.
