### COMMENTS TO AUTHORS

This case report is interesting, and seems to be worthy for publication. 1. The length of the text should be shortened, and the detailed data of blood examination in the "case report" section (page 4, initial paragraph) are not necessary. 2. There are so many figures, and the authors should show only representative selected figures. 3. Discussion section includes only general information regarding gastric NETs. Instead, the author should described much more about the discussion points of their own case, and the general information should be omitted as much as possible.

### COMMENTS TO AUTHORS

The authors reported a rare case of gastric NET in 11 years. The information of the progress of this case is very complete which is the highlight of this article. But in my opinion, the basic situation of this patient should be shortened. And I am wondering if the patient has a family history of cancer or stomach disease.
