COMMENTS TO AUTHORS

Interesting study about Danshen, a Chinese herb to induce salivary fluid secretion and its mechanism were examined as a candidate to improve xerostomia. In this study, the authors isolated the submandibular gland from the rat, the excretory duct was cannulated, and the secreted volume was measured. The results suggest that the use of Danshen to treat xerostomia, which could avoid the systemic side effects by the muscarinic drugs. Some minor revision: 1 The text should be edited according to the journal's guideline. 2 Some minor language polishing should be corrected. 3 The results are clear and well discussed. But the references should be updated.
