COMMENTS TO AUTHORS

Wu et al reported that vincristine can activate HBV replication due to S-phase cell cycle arrest. This paper is well written and easy to understand. Data seem to be convincing. However, the authors should be careful to describe the details of methods. The explanations of the methods and figure legends are insufficient. For instances, the primers and conditions of PCR and RT PCR are unclear. How were Dane particles distinguished from nucleocapsid? How did the authors calculate the relative HBV antigen levels? What is rc, ds, and ss in Fig 2. What does the red color, dash area, and lines mean? Insufficient explanations damage the quality of this article.

COMMENTS TO AUTHORS

The manuscript has too many mistakes and it cannot be readable.
