COMMENTS TO AUTHORS

This is a case report that HGD existed in the whole esophagus. Although this case is interesting, the following questions should be answered. 1) In spite of HGD, the patients complained dysphagia and stenosis was found in the endoscopy. How about the pathologic finding of this segment after surgical resection? Are there cancer cells in the deep mucosal or submucosal layer? 2) Endoscopic findings should be included. 3) Gross surgical specimen and pathologic findings should be added.

COMMENTS TO AUTHORS

Interesting "Case report" with new information. As the authors mention we maybe have to consider a new WHO definition for HGD.
