COMMENTS TO AUTHORS

This report illustrates the successful use of OTSC in the treatment of bleeding peptic ulcer. While the procedure is well documented, the narrative part of the text suffers considerably due to poor composition, word duplication, and grammar. Examples are, line 4 under Abstract, "duodenal wall use of " should read "duodenal wall using an ..". Last line on p.2. repeated twice "showed". Other examples; usage of "spurtering, sputerring, and splunting" Well, which word is right? Hence, kindly please go over the text and correct these omissions.

COMMENTS TO AUTHORS

Thank you very much for the opportunity to review this manuscript. In summary, this paper represents a nice case report with few reasons for criticism. Nevertheless, I am sorry to argue, that this manuscript is not suitable for publication in WJG due to the inadequate interest to readers.

COMMENTS TO AUTHORS

In the title of this paper you must write "over the scope clip" instead of OTSC When you comment about red blood cell count you must change by the hemoglobin levels expressed in g/dl.

COMMENTS TO AUTHORS

Major points 1. Authors wrote that the patient did not take any medication. But I suggest that authors need to add and/or check that the patient did not take any NSAIDs. 2. The discussion was too limited. I suggest that authors need to explain about OTSC more clearly, and need to include the downside of using OTSC through endoscopy. 3. Authors need to add whether the patient was infected with H. pylori or not. Minor points 1. On page 3, line 1, the word "showed" was written twice. 2. On page 3, last line, the letter before the USA was an unreadable character. (this could be a software compatibility problem) 3. RBC should be written as 5.3, NOT 5,3
