COMMENTS TO AUTHORS

Review on the paper "Overexpression of Csk-binding protein decreases the growth, invasion, and migration of esophageal carcinoma cells by controlling Src activation". In this manuscript, the authors established CBP overexpression esophageal carcinoma cell line(TE-1) and determined its growth, invasion and migration. They concluded that CBP may be a potential tumor suppressor and Targeting the CBP gene may be an alternative strategy for the development of therapies for esophageal carcinoma. This manuscript is very interesting. Only some minor correction needed. 1 The abstract should be re-arranged accordingly (Aim, methods, results and conclusion). 2 Manuscript need editing. 3 Minor language polishing should be corrected.
