COMMENTS TO AUTHORS

This case reports described that patients with chronic HCV infection who have experienced relapse shortly after completing treatment with Peg-IFN and ribavirin achieved SVR by treatment with Peg-IFN and ribavirin alone. It is good report, but there are several minor issues that should be addressed.   Minor comment 1: The authors should give the full phrase when they use abbreviations. For example, they used an abbreviation "RVR" without giving the full phrase .   Minor comment 2: I am afraid that there are copy and paste within the abstract from the introduction. The authors should improve the abstract.
