COMMENTS TO AUTHORS

1.What about the category of arteriovenous fistula? 2.Case 4, "when she had dysarthria" should be "when he had dysarthria". How to treat the patient 4? What about the prognosis of patients 2 to 4? 3.The discussion is very difficult to follow and should be briefly written. 4.Many typo, such as "fiatula", "Even". 5.What did the authors mean about "HAPF" and "SOS" the discussion?

COMMENTS TO AUTHORS

The manuscript presented by Zhang Danying et al reports four cases of a rare cause of presinusoidal portal hypertension: IAPF. The authors performed an evaluation of the syndrome in a well-organized and concise review. I found the report interesting. Please, see below minor comments to the paper.

- There are several typo error that should be corrected, please check the spelling.
- All the abbreviations should be identified, so the first time that an abbreviation is used the original word should appear in brackets ().
- A table reporting the main findings of the four described cases and also highlighting the main findings of the cases reported in the literature so far would be desirable.
- A clear description of the time of follow-up after the embolization and the development of complications associated to portal hypertension after embolization should also be reported.

COMMENTS TO AUTHORS

The manuscript presented four cases of HP caused by presinusoidal portal hypertension: IAPF. I found the case report interesting but the discussion is very difficult to follow and should be re-organized and pay more attention on the diagnosis, prognosis and treatment methods of the diseases. There are several typo error that should be corrected, please check the spelling.
