COMMENTS TO AUTHORS

Interesting and well documented case. Although, it would be necessary to revise the language by an English native speaker. MORE histopathologic images should be added.

COMMENTS TO AUTHORS

The "Case Report" paper by Huang et al. demonstrated the rare case of primary gastric myeloid sarcoma without the manifestation of AML. The presentation of the data was clear and experiments were performed carefully. Genaral comments: 1. Authors should demonstrate the evidence showing that the primary site was the stomach. How about pancreas, bile duct, omentum, lymph node and bone as the possible primary site? 2. Approximate sizes of the tumors involving stomach, pancreas, bile duct, omentum, lymph node and bone by FDG-PET-CT may better be shown. Minor comments: 1. Discussion, Page 6, line 20: "myeloproliferative diseases" should be "myeloproliferative neoplasms" and "myelodysplastic disorders" should be "myelodysplastic syndromes".
