COMMENTS TO AUTHORS

Authors reviewed the treatment options for anal cancer which is a rare type of cancer. Chemotherapy in combination with radiotherapy is still the mainstay of localized or locally advanced SCAR, where there is no other regimen supersede the 5FU with MMC. Authors nicely covered many aspects of treatment based on stages of the diseases. Moreover, some targeting agents which are awaiting for more studies in metastatic diseases are also mentioned. Overall authors give a good coverage and citation and summary in readable tables. Minor comments: -Title of the manuscript could be a little more attractive -Few typing errors in manuscript that need attention

COMMENTS TO AUTHORS

1. This paper summarized a large number of related articles and introduced some novel therapies for anal cancer. It has certain guiding significance for clinical treatment. 2. The current treatment of cancer is multidisciplinary, including surgery, chemotherapy, radiotherapy. Only emphasize chemotherapy in review may reduce the clinical guidance value. 3. This paper wanted to emphasize the optimum chemotherapy for anal cancer patients. But in the section of "Recurrent and residual disease", surgery and radiotherapy were mainly presented.
