## COMMENTS TO AUTHORS

Very interesting manuscript about small bowel obstruction. After some minor correction of language, the manuscript can be accepted for publication in the journal.

## COMMENTS TO AUTHORS

This is a very interesting study about the safety and efficacy of percutaneous needle decompression in treatment of malignant small bowel obstruction. In this study, the authors made a prospective analysis of the clinical data of 52 MSBO patients undergoing percutaneous needle decompression. They concluded that the percutaneous needle intestinal decompression is a safe and effective palliative treatment for malignant small bowel obstruction. The manuscript is very well written. Only some minor revisions needed. 1 The title of Introduction is missing. 2 Discussion should be more focus on the results.
