COMMENTS TO AUTHORS

This article studies a problem of great scientific interest: the therapy of women with chronic hepatitis C in pregnancy. The methods and statistical analysis are well presented. The table must be rebuilt, due to the fact that it is not readable. When a sentence begins with a number, it should be written in letters, not numbers. The units of measurement should not be missed. There are some expression errors, that the text must be reviewed grammatically. The results of this study are useful for the medical world, and after recommended corrections, I propose that this article be published.

COMMENTS TO AUTHORS

Because of this study evaluates the safety and efficacy of tenofovir monotherapy in pregnant women with chronic hepatitis B, the paper should provide the average weight and height of infants from normal pregnant women whose living environment and condition were similar to treatment group as control. It is best to provide follow-up situation of development and intelligence of tenofovir monotherapy group infants after birth.
