COMMENTS TO AUTHORS

Helicobacter pylori (H. pylori) infection contributes to several gastrointestinal diseases. The authors conducted a systematic review and meta-analysis of clinical trials with treatment including both tetracycline and amoxicillin versus other regimens for eradication of H. pylori, and it would provide clinical practice guidelines for successful and cheap eradication. General impression, It is a nice article, and the study has some interesting new ideals. This study had several inevitable limitations as authors said in articles, for example, some obvious heterogeneity, bias and unpublished data or only abstracts. I advise that it would be better if the study added cost-benefit analysis of various regimens for eradication of H. pylori.
