<input type="checkbox"/> Grade E: Poor		<input type="checkbox"/> No records	<input type="checkbox"/> Major revision

## COMMENTS TO AUTHORS

This review is overall very well-written and worth for publishing in World Journal of Gastroenterology after minor revision as listed below. Comments 1. Although the authors use "stellate ganglion cell", it is not a common name for "hepatic stellate cell". stellate ganglion usually means ganglia cell of the sympathetic nervous system. The authors are advised to reconsider about this point. 2. The authors mentioned about the role of renin-angiotensin-aldosterone system (RAAS) on splanchnic hemodynamics. RAAS is also well-known to play an important role on liver fibrosis development as they referred on #49. The authors are advised to discuss RAAS in more detail.

## COMMENTS TO AUTHORS

The manuscript "Hepatosplanchnic circulation in cirrhosis and sepsis" by Meghan Prin et al. is a review. Liver cirrhosis and sepsis is remains one of the most important problems reanimatology. This review presents the physiological and pathophysiological mechanisms of hepatosplanchnic circulatory disorders in patients with cirrhosis and sepsis. The review is well written. The authors should give the full name of C. difficile. The review will be useful for clinicians working in intensive care units
