### COMMENTS TO AUTHORS

This paper is about the outcome of non-resected main-duct intraductal papillary mucinous neoplasms of the pancreas. This is good paper for clinicians working at this field. However there are some points requiring correction: 1-There are many repetitions, these must be excluded, 2-There are some problems in medical terms like:prognosis factors-prognostic factors 3-It will be helpful for the readers to make a Table showing the other cases series addressing the clinical properties and therapeutic approach 4-Grammar and English must be reviewed and corrected

**COMMENTS TO AUTHORS**

In this study the clinicopathological characteristics and outcomes of resected and non-resected main-duct and mixed-intraductal papillary mucinous neoplasms of the pancreas (IPMN) have been investigated. According to my opinion this is an interesting study however following revisions are required: 1. The manuscript is highly repetitive and should be shortened 2. The extensive grammatical and typo grammatical errors should be corrected.
