## COMMENTS TO AUTHORS

Well written review on an interesting topic. Some minor changes needed: 1) some information about the role of immunosuppression in the recurrence of HCC in patients transplanted for HCC. 2) it would be interesting to add some information regarding the median time to develop malignancy following OLT

## COMMENTS TO AUTHORS

This review paper by Carenco et al. described the incidence and risk factors of solid cancers as well as the mechanism underling cancers in post-LT patients. It is easy to read and well summarized the data on these important issues. The reviewer has two comments. (1) Page 7: The text lacks specification on 'a lower level of immunosuppression' and 'comparison with the data observed in kidney transplant patients'. Could the authors add the information to the text to fit the subtitle? (2) It would be interesting to provide the median (average) time to development of individual cancers following LT. Could they be categorized into early versus late development?
